

SOVA automatic recirculated water supply system

We recommend to equip the vacuum machines with the Automatic Water Recycling System - "SOVA".

SOVA provides the unit with clean, cold water, and drastically reduces shop floor costs for circulating water.

The presence of automatic coolant control at the inputs and outputs, continuous water purification with built-in filters (in the external and internal cooling circuits) guarantees the stable operation of the units, significantly increases their resource.

Return water flow	3000 l / h
Maximum outlet pressure	0.6 Mpa
Max. circulating water temperature	70 ° C
Min. return water temperature	10 ° C
Max. heat removal power	30 kW
Max. power consumption	2000 W
Power supply	220V
Control protocol	Modbus TCP
Weight	59 kg without water
